Term Definitions

- **HP (Hit Points):** The life force of each Player and Character card.
- **TP (Technique Points):** A value that is used to play most types of cards.
- **PLV (Powerlevel):** The main attack power of each Player and Character.
- **Turn:** An entire set of Phases for a single Player.
- **Round:** A single cycle of all Players' Turns.
- **Deck Zone:** The zone where your Deck is stored.
- **Fighter Pool Zone:** The zone where your Fighter Pool is stored.
- **Discard Pile Zone:** Where all destroyed cards and Knocked Out Characters go.
- **Rift Zone:** Where all imprisoned cards go.
- **Hand:** The cards you're currently holding. They remain unrevealed to other Players unless otherwise stated.
- **Character Zone:** You play Characters to the Character Zone.
- **Backup Zone:** You can move Characters to and from your Backup Zone from your Character Zone during certain portions of the Battle Phase.
- **Knock Out:** A Character or Player has been defeated either by card ability or their HP being reduced to 0. If it's a Character, that Character is sent to your Discard Pile unless otherwise stated. If it's a Player, that Player loses the game unless otherwise stated.
- **Destroy:** Destroying a card sends it to your Discard Pile unless otherwise stated. You can't destroy Players.
- **Imprison:** Imprisoning a card sends it to your Rift Zone unless otherwise stated. You can't imprison Players.
- **Target:** An object within the game, either being a card or Player.
- **Ability:** An effect generated by objects within the game. Abilities may require costs for activation, have trigger conditions, have a constant static effect, or even outright replace other abilities with new ones.

Introduction

F.A.D.E. is a trading/collectible card game between 2 to 4 players where you battle each other using similar systems found in Fighters, Beat-em-ups, and action-themed Anime/Manga, as well as various other trading card games.

Setup Process

Required materials to play this game include:

- Pencils and Paper for various stats tracking
- Tokens, Counters, and Coins for various stats tracking
- At least a 60-card Deck for each player
- An optional Fighter Pool made of Character cards for each player

Before starting, all players must shuffle their Decks and put them in their Deck Zone, then put their Fighter Pool in their Fighter Pool Zone. Each player starts with 30 HP, 0 TP, and 1 PLV. Determine who goes first with a dice roll, then each player draws 6 cards. Turn order goes clockwise.

Mulligan

When drawing your initial Hand of 6 cards at the start of the game, you may choose to shuffle your Hand back into your Deck and draw a new hand of 6 cards. You may only do this up to two times per start of the game.

Card Anatomy

Elements, Name, Cost

Illustration

HP, Supertypes, PLV
Rank, Archetypes

Card Ability Text

Illustrator, Set Code, Set Symbol

- Elements are shown in the top-left corner of the card. Each card can have up to 2 Element Symbols listed here.
- The card's Name is in the top-middle section of the card.
- The card's Cost, labeled with a value of TP, is in the top-right corner of the card.
- HP is listed in the center-left portion of the card next to the Supertypes.
- PLV is listed in the center-right portion of the card next to the Supertypes.
- The card's Supertypes are in white text under the illustration. Under that is the card's Rank, followed by its Archetypes.
- In the slightly lighter area on the card is the card's Ability Text.
- On the bottom of the card is the Artist, Set Code, and Set Symbol of the card.

Card Rarity

Some cards have different set symbol and name text colors. This tells you the rarity level of the card.

- **Common:** Black set symbol and name text.
- **Uncommon:** Gray set symbol and name text.
- **Rare:** Green set symbol and name text.
- **Super Rare:** Blue set symbol and name text.
- **Ultra Rare:** Pink/purple set symbol and name text.
- **Omega Rare:** Gold set symbol and name text.

Turn Phases

Each turn is made up of Phases, each with their own rules. All players must go through each of these phases in order.

- Starting Phase: Some abilities activate during this Phase. Once completed, you gain 1 TP.
- Draw Phase: Some abilities activate during this Phase. Once completed, draw a card from the top of your Deck. The player going first doesn't draw a card during their first turn when playing in a two-player game.
- Preparation Phase: During the Preparation Phase, you may perform any of the following:
 - ◆ Play Characters from your Fighter Pool face-up into the Character Zone or Backup Zone unless otherwise stated. You must have at least 1 Character in your Character Zone before you can add Characters to your Backup Zone. Character cards played from your Fighter Pool have Exhaust the turn they enter the field unless otherwise stated, meaning they can't attack or activate their abilities.
 - ◆ Attach Skills or Reactions to Characters face-down unless otherwise stated. Pay their cost when they're revealed.
 - ◆ Play Items or Augments face-up, paying their costs.
 - ◆ Play Zones face-up. More info on these can be found later in this book.
 - ◆ Put Characters from Character Zones into your Backup Zone unless they can't act, or put Characters from your Backup Zone into Character Zones unless they can't act.
- Combat Phase: The Combat Phase is where all the action is. It'll be thoroughly explained in the Combat Info section.
- Aftermath Phase: The Aftermath Phase plays similarly to the Preparation Phase, with the added ability to reattach cards you control to different sources.
- End Phase: Some card abilities activate during this Phase. Once this Phase is completed, it's the next player's turn.

Combat Info

Combat Basics

Upon entering the Combat Step, you may attempt to do battle with your opponents. Characters you control can perform a Normal Attack once per turn with no cost that deals Basic Damage equal to the user's PLV. Additionally, both your and your opponents' Characters may activate their abilities and play cards that are attached to them either to perform extra actions or respond to other abilities.

Combat Zone Order

Combat Zone Order comes into effect whenever you try to target specific enemies with attacks or abilities that require reach. Unless otherwise stated, you and Characters you control in your Character Zone target Characters in your opposing Players' Character Zones first, then the Characters in their Backup Zones, then finally those Players directly. If your Character Zone has no Characters, all Characters from your Backup Zone are sent to your Character Zone once the current Chain has resolved completely.

Element Rules

- Cards that are comprised of one or more Elements are affected by abilities that target just one of their Elements.
- If a card requires more than one Element from specific cards, those cards must have all matching Elements among that group of cards.

Hit & Damage Rules

- If an Attack ability has multiple Hits, each Hit deals its own instance of damage.
- Cards and abilities may alter the damage dealt.

Defending Mechanics

- **Block:** Cards that "Block" attacks turn the current attack's damage to 0. Other abilities of those cards may still happen, however.
- **Deflect:** "Deflect" causes attacks to be redirected, usually to a relevant Character or Player of your choice as though the user of this Deflect had activated that attack.
- **Negate:** Cards that "Negate" cause that card or ability to do nothing. This includes any abilities that would happen without the card dealing damage. Negated cards are then sent to their owners' Discard Piles.

Rank

All Skills, Reactions, Items, and Augments have a Rank. The Ranks are below, from the weakest being at the top to the strongest being at the bottom:

- **Normal:** The most basic of Attacks or abilities. Shown on cards as a lone bronze star.
- **Special:** A special Attack or ability, usually weak. Shown on cards as two stars.
- **Hyper:** A powerful Attack or ability, possibly with some kickback. Shown on cards as three stars.
- **Ultra:** Game-changers at best, they boast lots of power. Shown on cards as four stars.
- **Devastation:** Over-the-top, possibly game-ending abilities. Shown on cards as five stars.
- **Legendary:** The ultimate level of abilities. Shown on cards as six stars.

Cards can reference a Rank and state they affect that Rank or higher/lower. Count the number of stars they're referencing to figure out which Ranks they affect.

Damage Types

All attacks have at least one Damage Type. The Damage Type a card deals matters when it comes to certain card abilities, most notably Reactions that try to do one of the Defending Mechanics. The Damage Types are as followed:

- *Basic*: Deals damage that can be Blocked, Deflected, or Negated.
- *Unblockable*: Deals damage that cannot be Blocked or Deflected, but can be Negated.
- *True*: Deals damage that cannot be Blocked, Deflected, or Negated.

Knock Outs and Hit Count Overflow

Whenever a Character's HP becomes 0, that Character is Knocked Out. The Character is then sent to their owner's Discard Pile. If there are still hits that haven't been performed when your targets are Knocked Out, they don't hit any other targets unless otherwise stated.

Whenever a Player's HP becomes 0, that Player is Knocked Out unless otherwise stated. As stated before, if this happens, that Player loses the game.

The Chain

Whenever you play a card or perform an ability, you start the process known as The Chain. The Chain increases in size as more cards and abilities are played to try and interact each other. Starting a Chain is simple, but executing a large Chain may take a while to get used to.

Example Chain 1

1. Ability A (Item)
2. Ability B (Hyper Rank Reaction, Negates an Item)
3. Ability C (Special Rank Reaction, Negates a Hyper Rank Reaction)

Ability A, in this case an Item card, starts the Chain. Ability B, a Reaction, tries to negate Ability A, making it useless. Ability C, however, is then played next, which attempts to negate Ability B.

Ability C happens first. This is called "First-In-Last-Out" order, or FILO for short. Cards and abilities that enter earlier in the Chain happen later in the Chain. The end result here is that 3 cards end up being used and Ability A happens anyway.

Example Chain 2

1. Ability A (Normal Attack)
2. Ability B (Reaction, Attack)
3. Ability C (Reaction, Block)

Ability A, a Normal Attack, starts the Chain. Ability B, a Reaction, performs an Attack in response. However, Ability C Blocks the attack created by Ability B, thus preventing it from dealing damage! Ability A deals its damage normally.

Chain Starting Rules

Here are the rules to Start a Chain:

- Items, Augments, and Skills can start a Chain but cannot continue a Chain.
- Reactions can continue a Chain but cannot start a Chain.
- Activated abilities of cards can start or continue a Chain.

If there's a Chain already happening, you must wait for it to completely resolve before starting a new one.

Chaining Abilities

Some abilities are specific to Chains, meaning they must always continue a Chain to take effect. Here's a short list of Chaining Abilities:

- The Defending Mechanics (Block, Deflect, Negate)
- Abilities that target an attacker
- Triggered abilities that respond to other cards or abilities placed in or removed from the current Chain

Resolving The Chain

Resolving the Chain follows a particular order of operations, which are listed below:

1. A card or ability either creates a Chain or is added to the current Chain.
2. That ability determines who or what it's targeting.
3. That ability attempts to resolve. At this point, other cards and abilities may attempt to intercept the process of resolving by utilizing Player Priority, listed below.
4. Once all interceptions are accounted for, the current Chain resolves in First-In, Last-Out order.

Once a Chain hits Step 4, no more cards or abilities can be added to it.

Player Priority

Players trade off who can interact at specific moments in time via Player Priority. The player who currently has priority is the only player who can act at the current moment.

Once a Chain is created, whether intentionally or otherwise, the player who's turn it is actively gets priority to respond first upon the Chain hitting Step 3 of resolving it. They may maintain priority to continue the current Chain or pass at any point. Once they finish responding, the next player in turn order gains priority and the previous player may not act again until priority comes back to them.

If each player passes without further responses, the Chain then finally goes to Step 4 and finalizes resolution of all cards and abilities within it.

Other Rules

Winning the Game

In order to win, you must be the last person or team standing. Losing the game requires one of the following conditions to happen:

- You become Knocked Out.
- Your Deck is empty when you attempt to draw one or more cards from it.

Limitations

- During your End Phase, if you have more cards in your Hand than your Maximum Hand Size, you must discard cards from your Hand until you have a number of cards equal to your Maximum Hand Size. By default, your Maximum Hand Size is 10.
- Your Deck must have exactly 60 cards. Your Fighter Pool must have no more than 30 cards.
- Your Deck and Fighter Pool can have up to 4 of the exact same card, determined by card name, unless otherwise stated.
- Each Player can have up to a maximum of 10 TP unless otherwise stated.

Augments and Items

- Items are single-use unless otherwise stated. Once used, they're destroyed and sent to the Discard Pile.
- Items can be played during any player's turn.
- Augments add new abilities to the Character or Player they're attached to.

Archetypes

Archetypes are used to further differentiate cards from each other. Each card can have one or more Archetypes listed under their Supertypes and can be referenced in ability text to affect cards of specific Archetypes.

The Last Stand

If you have no Characters on your side of the field, you enter a state called The Last Stand. While in The Last Stand, you can attack your opponents with Normal Attacks or Attack cards from your Hand. If you deal damage with a Normal Attack, you gain 2 TP instead of 1. However, you're reachable regardless of Combat Zone Order unless otherwise stated.

Counters, Stacks, and Keywords

- Counters can trigger abilities specific to them. You cannot move Counters to and from targets unless otherwise stated.
- Stacks are piles of cards in the Character or Backup Zone underneath their respective owner. Cards can be added or removed from their owner to activate certain abilities. You cannot transfer Stacks to and from cards unless otherwise stated. Cards inside of a Stack do nothing by themselves.
- Keywords are small phrases that have specific abilities tied to them. Players and cards can gain and lose Keywords from other abilities.

Supertypes

A card can have one or more Supertypes, giving it the properties of each Supertype it possesses. Each Supertype grants the following properties:

- Character: The card can be played to your Character Zone or Backup Zone and protects you directly.
- Skill: The card can be attached to Characters and/or used from a Player's Hand as additional actions for that Character or Player.
- Reaction: The card can be attached to Characters and/or used from a Player's Hand to respond to another card or ability activation.
- Item: The card is single-use and, upon resolving, is destroyed unless otherwise stated.
- Augment: The card can be attached to Characters and/or Players, granting that Character or Player new abilities.
- Token: The card is a temporary object within the game and can't be placed in your Deck. Another card and/or ability must be able to create Token cards for you to play them.

Keyword List

- Arm Up: This target is Armed Up as long as a certain number or more cards with Equip are attached to it.
- Aura Counters: Put that many of these Counters on your targets, removing Drain Counters instead as needed until the difference is met. They get +1 PLV for each of these Counters on them.
- Backup: This target's Backup ability is active as long as it's in a Backup Zone.
- Barrier Counters: Put that many of these Counters on your targets. Whenever a target with 1 or more of these Counters on it becomes targeted by a nonAttack ability, you may remove 1 of these Counters from it to Negate that ability.
- Blindness Counters: Put that many of these Counters on your targets. Whenever that target Attacks, flip a coin. If Tails, that Attack does nothing. At the beginning of your End Phase, remove 1 of these Counters from it.
- Bloodlust Counters: Put that many of these Counters on your targets. Whenever it deals Damage, it heals for HP equal to the number of these Counters.
- Boss: As an additional cost to play this card, imprison a number of Character cards from your Discard Pile.
- Buildup: This card enters face-up attached to you. If it has a certain number or more cards underneath it, you may activate it.
- Charge: During your Starting Phase, gain a number of TP.
- Concussion: Whenever this target is dealt Damage, it's Knocked Out.
- Contingency: You may play this card as a Reaction if its Contingency is met.
- Curse Counters: Put that many of these Counters on your targets. At the beginning of your Starting Phase, you may pay 1 TP for each of these Counters on that target. If you don't, destroy that target.
- Deathmark: Whenever an ally of equal or higher level is destroyed, this target is Knocked Out.
- Drain Counters: Put that many of these Counters on your targets, removing Aura Counters instead as needed until the difference is met. They get -1 PLV for each of these Counters on them.
- Energize: This target loses Exhaust and gains Flash.
- Equip: Attach this card to a relevant target when it enters.
- Exhaust: This target can't Attack or activate its abilities. At the beginning of your Starting Phase, it loses this keyword.
- Flash: This target can Attack and activate its abilities the turn it enters.
- Flurry: The first number of times this target deals Damage with an Attack, you may play a Skill or Reaction from your hand as though it's attached to it.
- Fracture Counters: Put that many of these Counters on your targets. Whenever a target with Fracture Counters Attacks, put 1 Damage Counter on it for each of these Counters.
- Immune: This target cannot be targeted or affected by the listed card types, keywords, Counters, or effects.
- Infused: This target and all of its Attacks are the listed elements instead.
- Lock-On: This target can reach all other targets.
- Mastery: This target's Attacks deals double Damage as long as those Attacks have at least 1 of the listed elements.
- Multistrike: This target's Normal Attacks hit up to a number of extra targets.
- Mute: This target's abilities do nothing and cannot be activated or triggered.
- Mythical: Only 1 copy of this card can exist under your control.

- Orbital: This target and all cards attached to it and stacked underneath it become unreachable by opponents unless they have Orbital or Lock-On.
- Overdrive: You may pay this cost to activate this target's Overdrive ability before it resolves.
- Paradox: This target's Paradox ability is active as long as you control Characters that have at least 1 of each of this target's elements.
- Paralyze Counters: Put that many of these Counters on your targets. During your Starting Phase, remove 1 of these Counters. It cannot Attack or activate its abilities until your next Starting Phase.
- Poison Counters: Put that many of these Counters on your targets. At the beginning of your Starting Phase, put 1 Damage Counter on that target for each of these counters on it. Then, remove 1 of these counters from it.
- Power Counters: Used to keep track of or activate other effects. Does nothing by itself.
- Provoke: Opponents' Attacks must target cards or Players with this keyword first if able.
- Reinforce: This target's Reinforce ability is active as long as a certain number or more Characters are in your Backup Zone.
- Replay: You may pay this cost to activate this target again before it resolves.
- Shield Counters: Put that many of these Counters on your targets. Whenever a target with 1 or more of these Counters on it becomes targeted by an Attack, you may remove 1 of these Counters from it to Block that Attack.
- Stacker: When this card enters, you may put a number of cards from your Hand underneath it.
- Surprise: This card enters face-down attached to you. Whenever its Surprise is met, you may play it.
- Timebomb Counters: Put that many of these Counters on your targets. At the beginning of your End Phase, put 1 of these Counters on that target. Then, if it has 5 or more of these Counters, it's Knocked Out.
- Transform: As an additional cost to play this card, place the listed cards you control underneath it when it enters.
- Vengeance: Whenever an ally Character is Knocked Out, trigger this target's Vengeance ability.
- Void: If this card would be destroyed, imprison it instead.
- Wildcard: This target is every nonNull element.
